Safer to Wait
Protecting Children's Health

"This is a unique situation where we as a company simply cannot take the risk if in...four years the vaccine is showing side effects."
(Paul Doherty, AstraZeneca senior vice president, discussing why pharmaceutical companies have been granted zero liability - source: Financial Times, 30 July 2020)

Dear Parent / Carer,

You may be aware that the Government is planning to roll out the COVID-19 vaccines to our children soon. This is already happening with over-16s in Manchester, despite safety and efficacy trials being incomplete.

There has been a lot of coverage of this in the media, and your child's school or local health authority may already have given you some information.

STOP

Covid-19 vaccination for ages 5-11
Vaccinate or wait?

STW

We're Evolving...

Should you have the Covid-19 vaccine?

Questions for children and their Covid-19 vaccines are likely to be offered to 12-15 year olds over weeks. You may feel bombarded by information and under pressure. All drugs or medicines have some side effects, so it's important any benefits of the vaccine with any risks when making a decision.

What are the possible benefits of having the vaccine?
The vaccine is said to help reduce the chance of getting really sick and needing to go to hospital. STW is very wary for children to get vaccinated because we don't know if it will protect them from getting Covid-19 or if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses.

Will it stop me catching Covid?
The vaccine is said to help reduce the chance of getting really sick and needing to go to hospital. STW is very wary for children to get vaccinated because we don't know if it will protect them from getting Covid-19 or if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses.

What if I pass this virus to someone else who might be more vulnerable?
Remember, the vaccine is said to help reduce the chance of getting really sick and needing to go to hospital. STW is very wary for children to get vaccinated because we don't know if it will protect them from getting Covid-19 or if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses.

Will it help me keep my school open?
The vaccine is said to help reduce the chance of getting really sick and needing to go to hospital. STW is very wary for children to get vaccinated because we don't know if it will protect them from getting Covid-19 or if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses.

What if I've had Covid?
The vaccine is said to help reduce the chance of getting really sick and needing to go to hospital. STW is very wary for children to get vaccinated because we don't know if it will protect them from getting Covid-19 or if it will protect them from getting other illnesses. We don't know if it will protect them from getting other illnesses.

Dear Parent / Carer,

You will be aware that the government has now begun rolling out the Covid-19 vaccines to our children. This is already happening with over-16s in Manchester, despite safety and efficacy trials being incomplete.

There has been a lot of coverage of this in the media, and your child's school or local health authority may already have given you some information. Many schools have also been directly presenting children with misleading information regarding the vaccine.

As parents, we have a very big decision to make, with and on behalf of our children. There are many things to consider.

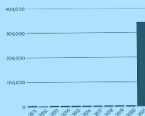

The standard childhood vaccines are well-established and have been shown to be safe and effective. However, the current UK Covid-19 vaccines have ingredients that are not found in traditional vaccines and use brand new, gene-based technology (the body's cells are given genetic instructions to reproduce part of the virus (the spike), rather than the standard process of growing weaker or inactive virus).

It is unknown how long the spike continues to be produced, until the end of their safety trials (2023), the Covid-19 vaccines remain unlicensed and experimental.

The risk to children from natural infection with the virus is almost zero, and over 90% of children who catch the virus will make a full recovery. While it may make sense for those very few children with pre-existing conditions who are at serious risk from Covid-19 to be vaccinated this year, the risks from the vaccine for otherwise healthy children are far greater than the benefits for the vast majority of children.

Covid-19 vaccines and pregnancy
What do we know?

STW

There are a group of concerned parents, teachers, doctors, and lawyers, who are - just like you - trying to make the best decision about it comes to the Covid-19 vaccine and children.

Please take a few minutes to read and consider the points covered.

GROUP 2
VAL FRASER
The Safer to Wait Campaign

March 2023

Help Us Grow

Safer to Wait was founded in the Spring of 2021.

Our goal was, and continues to be, to protect the health
of children.

Over the last few years, faith in our once-trusted institutions to do
what's best for the health, education and flourishing of our children
has been lost.

It's time for us all to take back responsibility and build the future they deserve.

With that dream in mind, Safer to Wait is evolving, into education,
children's general health and their overall wellbeing.

We'll continue to work with our trusted network of health practitioners, and
build new alliances with inspiring educators and specialists.

**We've been working completely voluntarily since 2021 but we're
now going to need your help.**

**If you'd like to be part of our vision, or if you've ever valued, shared
or benefited from our work, please consider giving what you can.**

**Go to safertowait.com/donate
or scan the QR code**

***A brighter world IS available for our children.
We want to help them create it.***
